1. Applicant's election with traverse of Group II (claims 12-18) in Paper No. 6 is acknowledged. The traversal is on the ground(s) that the claims of the respective groups can be conveniently examined without serious burden and questions whether the mere observation of a "different special technical feature" in the claims is alone sufficient grounds for issuing a restriction requirement. This is not found persuasive because each group has a different special technical feature not shared by any of the remaining groups as indicated in paragraph 2 of Paper No. 5 under PCT Rule 13.2.

The requirement is still deemed proper and is therefore made FINAL.

2. Claims 1-11 and 19-25 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in Paper No. 6.

3. The oath or declaration is defective. A new oath or declaration in compliance with 37 CFR 1.67(a) identifying this application by application number and filing date is required. See MPEP §§ 602.01 and 602.02.

The oath or declaration is defective because:

The specification to which the oath or declaration is directed has not been adequately identified. See MPEP § 601.01(a).

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 12-18 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 5,626,758 (hereinafter referred to as Belfort). Belfort teaches a multi-layered coiled hollow fiber

bundles designed to provide a specific performance output to create Dean vortices when subjected to a certain velocity wherein performance depends on the hollow fiber's inner and outer diameters, number of fibers, inherent angle of coiling and length of fibers and diameter of rod and inherently the length of the rod which fibers are coiled and minimization of gaps between fibers to inherently maximize the packing density of the fibers and above variables are calculated and manipulated to design coiled hollow fiber bundle that provide a specific performance output to create Dean vortices (see figures 1-2, 4-5, 7-15; col. 3, line 42 – col. 6, line 21).

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to John Kim whose telephone number is (703) 308-2350. The examiner can normally be reached on weekdays from 7:00 AM - 3:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wanda Walker, can be reached on (703) 308-0457. The fax phone number for official response after final action is (703) 872-9311, and the fax phone number for all other official faxes is (703) 872-9310.

When sending a draft amendment by fax, please mark the paper as "DRAFT"; otherwise, mark the paper "OFFICIAL". This will expedite the processing of the paper.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 308-0651.
